

Do you know your tyres?

All tyres have a life span of 6 Years, after that time these tyres can be deadly and can contribute to accidents due to tread separation from the casing, causing a tyre to explode, thus causing an accident.

Please check your tyre pressures to maintain even tyre wear and saving fuel by reducing rolling resistance.

All tyres have a tyre wear indicators (TWI) on the casing if the tread is level with this marker the tyre must be replaced.

If you have any queries please obtain, more information from your local tyre dealer or mechanic.
